

NHS – Princess Royal Hospital

Pharma Hygiene Products have been a trusted NHS supplier for over a decade.

Princess Royal Hospital uses large bowls and kidney dishes in their operating theatres.

Quicker lead times

- 100ml - 14L bowls are available as standard; off-the-shelf, for quick delivery.
- The average time from the NHS making payment to receiving the items, is 3-4 working days.

More reliable quality

- Due to the heavily regulated nature of this industry, it is critical for the NHS that they receive only the materials that are specified. X-Ray and Surface Finish Analysis is conducted to verify the material composition and the stainless steel surface smoothness, with certification supplied to guarantee peace of mind.
- The average surface roughness finish of the PHP range is an exceptional 0.4 micrometers Ra.

Fully compliant with industry regulations

- The COVID-19 pandemic has brought to light the critical role sanitation plays in everyone's daily lives; nowhere more so than hospitals. 304 and 316L pharmaceutical grade stainless steel are durable, easy to sterilize and re-useable. Stainless steel can be cleaned with alcohol-based disinfectants, and can be used in the NHS' industrial dishwasher/autoclaves.
- TSE certification guarantees that no animal fats have been used in the polishing process. This is vital to guarantee that no transfer of BSE or CJD virus elements occurs.
