LABELLING MACHINERY

P50

The P50 semi-automatic label applicator has been designed for small volume production runs for a wide range of products.

The P50 will consistently and accurately apply labels around the body of cylindrical products from 10mm to 60mm in diameter.

LABELLING MACHINERY

The proven stepper driven label head and 3 roller system ensures labels can be positioned and applied with precision each and every time.

Simply place the container on the adjustable rollers, a label is then dispensed by pressing the footswitch, leaving both hands free for fast and efficient production.

The P50 requires little maintenance and can be set-up and in production within minutes. Simple push button and dial controls are provided for all set-up functions of the P50.
